```

Should I just eliminate the lego directory? There *is* a stephaniemdavis.com.crt file **but there is no** **www.stephaniemdavis.com.crt** file. I was trying to cover all the possible domains but something got lost in translation as I now recall.

I won't rm anything until I hear from you, but guess I should just start all over again but with a clean slate.

Hi @smdavis ,

Please provide the content of the `/etc/lego/certificates` folder, to see if we have to re-run the generation scripts or adjust any of the symlinks.

Regards,

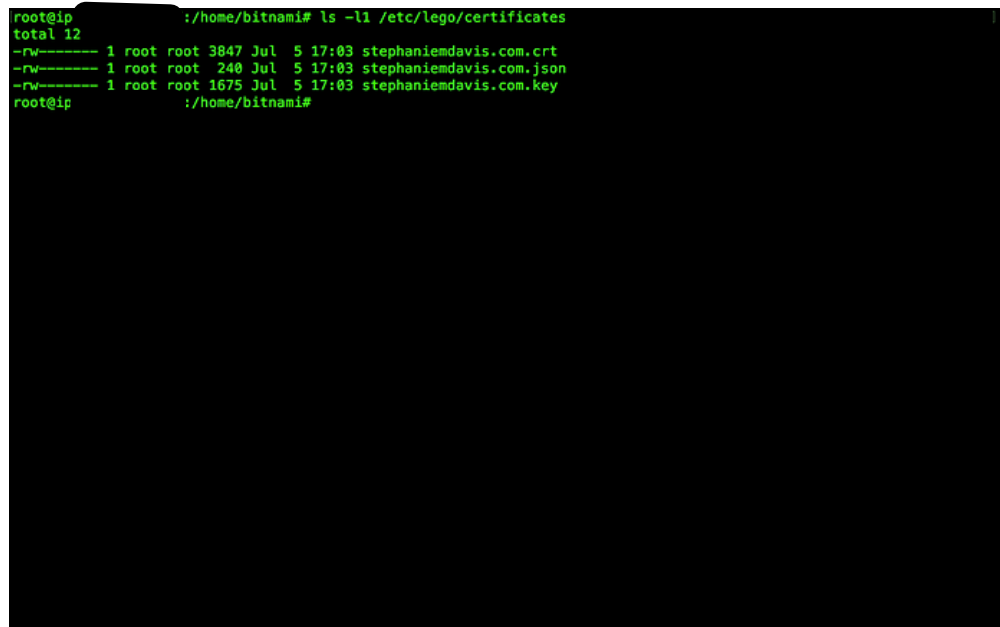

Andres R.

Good morning and thank you for responding. [image:  
:etc:lego:certificates.png]

```
root@ip                :/home/bitnami# ls -li /etc/lego/certificates
total 12
-rw----- 1 root root 3847 Jul  5 17:03 stephaniemdavis.com.crt
-rw----- 1 root root  240 Jul  5 17:03 stephaniemdavis.com.json
-rw----- 1 root root 1675 Jul  5 17:03 stephaniemdavis.com.key
root@ip                :/home/bitnami#
```

Hi @smdavis ,

Ok, let's fix the symbolic link then:

```
cd /opt/bitnami/apache2/conf
sudo rm server.crt
sudo ln -s /etc/lego/certificates/stephaniemdavis.com.crt server.crt
```

Regards,

Andres R.

I appreciate your help on this. Alas, my home page remains mired on the Apache2 default <https://www.stephaniemdavis.com/>. I think it simpler to initiate a new instance and start from square 1 using EITHER the lego or certbot approach. My mistake is that I started with lego and finished with certbot and messed up the configuration from the outset.

Thanks @smdavis ,

If you decide to start from scratch, our recommended approach is the lego one.

Regards,

Andres R.

I created a fresh instance from a snapshot I created as backup.
